

Calculator App Documentation

App Title

Calculator App

Objective

The main objective of this Calculator App is to provide users with a simple and efficient way to perform basic mathematical calculations on Android devices. The application is designed for students, teachers, and general users to solve arithmetic problems quickly and accurately. It helps reduce manual calculation effort and provides instant results through a clean and user-friendly interface.

Features

- Addition, subtraction, multiplication, and division operations
- Modern dark theme user interface
- Stylish and readable fonts
- Responsive button layout
- Instant result display
- Lightweight and fast performance
- User-friendly design for easy navigation
- Compatible with Android smartphones

Tools and Technologies Used

- Android Studio – Used as the development environment
- XML – Used for designing the application layout
- Java/Kotlin – Used for implementing calculator functions
- Gradle – Used for project building and dependency management
- Android SDK – Used for testing and running the application

Program Explanation

- The Calculator App contains buttons for numbers and mathematical operators. When the user clicks a button, the entered value is displayed on the screen. The program processes the input values and performs the selected arithmetic operation. The application uses event listeners to detect button clicks and execute functions accordingly.

Working Process

- User enters numbers using on-screen buttons
- Operator buttons are used for calculations
- Input values are stored temporarily
- Arithmetic operations are processed using Java/Kotlin logic
- Final results are displayed instantly on the screen

- The application was tested on Android devices to ensure smooth performance, responsive design, and accurate calculations. The dark theme and clean layout improve the overall user experience and make the application visually attractive.
